Subject: vzquota: Device or resource busy
Posted by [fxars](#) on Thu, 05 Apr 2007 19:38:30 GMT

I actually don't know how quotas got turned on, but one of my VE's has reached it.

I've been going through
    man vzquota
and it's not the most instinctive of docs.

Is there some documentation that includes examples of vzquota usage?

Also, I tried turning quotas off for that VEID, and here's what I got:

    $ sudo vzquota off 11 -f
    vzquota : (error) Quota off syscall for id 11: Device or resource busy

I have tried stopping the VE and starting it again, I tried offing the quota when the VE was stopped (vzquota doesn't like working on stopped VE's). No joy.

I deleted some files in that VE, so I have some running room, but it would be nice if I could double the quota.

Example:

vzctl set <veid> --diskspace 400M

also read man-pages on vzctl, vps.conf and vz.conf. There is information about vzquota: how to turn it off/on for one VE/all VEs.

HTH,
Vasily
