I wrote a wiki page in [http://wiki.openvz.org/Install\\_OpenVZ\\_on\\_a\\_x86\\_64\\_system\\_Centos-Fedora](http://wiki.openvz.org/Install_OpenVZ_on_a_x86_64_system_Centos-Fedora) with the workaround I talked about, to make vzpkgcache, vzyum and vzrpm to work on x86\_64 CPU with a Centos distro (or Fedora).

All the process is explained line by line, but to simplify everything, I also wrote a small script that installs openvz utilities, OS template, and applies the patches automatically.

I hope this could be usefull!

M.Carreira
