Subject: Unable to build OpenVZ kernel/2.6.20
Posted by atlantis on Mon, 09 Apr 2007 23:26:30 GMT

View Forum Message <> Reply to Message

After patching my vanilla 2.6.20 kernel, im unable to compile it:
root@Spirit ~/linux-2.6.20 # make
  CHK   include/linux/version.h
  CHK   include/linux/utsrelease.h
  HOSTCC scripts/basic/fixdep
  HOSTCC scripts/basic/docproc
  CC   arch/x86_64/kernel/asm-offsets.s
  GEN   include/asm-x86_64/asm-offsets.h
  CC   scripts/mod/empty.o
  HOSTCC scripts/mod/mk_elfconfig
  MKELF   scripts/mod/elfconfig.h
  HOSTCC scripts/mod/file2alias.o
  HOSTCC scripts/mod/modpost.o
  HOSTCC scripts/mod/sumversion.o
  HOSTLD scripts/mod/modpost
  HOSTCC scripts/kallsyms
  HOSTCC scripts/conmakehash
  HOSTCC scripts/bin2c
  CC   init/main.o

make[1]: *** [init/main.o] Error 1
make: *** [init] Error 2
root@Spirit ~/linux-2.6.20 #

The unpatched kernel compiles fine.
System is Lunar Linux 1.6.2 (64bit on an Opteron), gcc -v:
Using built-in specs.
Target: x86_64-pc-linux-gnu
Configured with: ../configure --host=x86_64-pc-linux-gnu --enable-languages=c++ --prefix=/usr
--infodir=/usr/share/info --mandir=/usr/share/man --enable-__cxa_atexit --enable-threads

--disable-nls --enable-target-optspace --with-gnu-ld --with-system-zlib --enable-shared
--disable-multilib
Thread model: posix
gcc version 4.1.2

Tryed both, 2.6.20 and 2.6.20.6.
Used patch-ovz002.1-combined.
Any hints?

Not sure how helpful this is going to be. But I've been able to successfully compile 2.6.20 with the
OpenVZ kernel patch. However, this was on a 32-bit machine, not a 64-bit machine. Perhaps the
problem is related to that. Did you cleanly apply the patch? Did it show any errors, etc.? Thank
you.

Depends on the kernel.
For 2.6.20 yes, not for 2.6.20.6 (all pure vanilla)
But it bails out on both with the same message

Hello,

please try attached patch. It'll be in git soon. Report us will you succeed in building OpenVZ
kernel.

Thanks,
Vasily.

Thanks, this fixes this problem.
Sadly, the next one isnt far away

Wow, I've just noticed that you're using test002 patch. It's too old Please, try test004 kernel from git! With my patch and without.

Thanks,
Vasily.

Im quite unshure who to handle your git repositorie, is linux-2.6.20 a complete, prepatched kernel?

Still unable to compile the kernel on Lunuar/64bit.
Just tryed the 32 bit version, and it compiles fine (after applying
diff-ubc-ioprio-compilation-fix-2.6.20-20070304).

Will stick to 32bit now.

Hello,

please, fill out the bug each time OpenVZ kernel doesn't compile smoothly!

Thank you,
Vasily.
