Heya,

my CentOs machine running 2.6.9-023stab040.1-smp reports lots of this messages:

TCP: time wait bucket table overflow

printk: 213 messages suppressed.

I checked the web for the solution and found this:

http://bugzilla.openvz.org/show_bug.cgi?id=460

The problem is that this fix is only valid for 2.6.18 kernels, but not for 2.6.9, which is default RHEL4 kernel.

So I am wondering what do you suggest:

- a) fix the proc values with the right ones (tell me which are the right ones)?
- b) upgrade to 2.6.18 (I dont know which kernel is better?)

thanks in advance, Jernej

Hello,

you can upgrade till linux-2.6.9-023stab043.2, there appropriate default values are chaged.

Vasily.
