```
[root@localhost ~]# vzctl create 102 --ostemplate fedora-core-3-i386-default --config vps.basic
```

```
Creating VPS private area: /vz/private/102
```

```
Unable to get full otemplate name for fedora-core-3-i386-default
```

```
Performing postcreate actions
```

```
VPS private area was created
```

Anyone else seen the above?

I get the error with any template other then centos 4.

Yes, the files are in the template cache directory.

That means template metadata for this template is not installed. In this very case you can safely ignore this warning.
