```

Is this check needed? If we have the check, then:

```
> + task_unlock(tsk);
> + if (cg)
> + put_container_group(cg);
```

init_container_group refcount is leaky (fork increments it, but exit doesnt). Not a big prob perhaps, but ..would be nice to avoid?

That's no problem.

Yes, I think you're right - over a long uptime that would just cause problems ...

Paul
