Subject: Need help understanding kernel version numbers Posted by jarcher on Wed, 11 Apr 2007 09:00:42 GMT

View Forum Message <> Reply to Message

Hi All...

I have always been confused by the kernel version numbers and I finally decided to just look stupid and ask.

I am currently running:

actual:/home/jim/openvz/kernels# uname -a Linux actual.registrationtek.com 2.6.18-openvz-amd64 #1 SMP Mon Mar 12 21:59:13 UTC 2007 x86_64 GNU/Linux actual:/home/jim/openvz/kernels#

The file name for the deb package for this version is:

linux-image-2.6.18-openvz-amd64_028.18-2.6.18-11-1_amd64.deb

I see that there is now:

linux-image-2.6.18-openvz-amd64_028.18.1-2.6.18-12-1_amd64.d eb

This file has a date of April 11, 2007, so I know it's newer. But how can I tell from the version numbers? Both are 028.18 but the newer one has a lower number, .1-2, than the older one, which has 6. So what's the proper way to parse this?

Also, is there a posted list of changes? I'm running OpenVZ in production now and so prefer not to risk an upgrade and reboot unless necessary.

Thanks!

Jim

Hi Jim,

Ola has updated the debianized OpenVZ Linux kernel to new Debian Linux Kernel Source :

```
" linux-image-2.6.18-openvz-amd64_028.18-2.6.18-12-1_amd64.deb " :
linux-image-2.6.18-openvz-amd64 ...
028.18.1
\_> OpenVZ Kernel Patch 028test018.1
(-> http://packages.debian.org/stable/devel/kernel-patch-openvz)
2.6.18-12-1
> Debian Linux Kernel Source
(-> http://packages.debian.org/stable/devel/linux-source-2.6.18)
Regards,
Thorsten

Ah, thanks very much Thorsten, I see how it works now. Is there a way to tell from the version number if a deb file has a test kernel or a stable one?

Hi,

028.18.1 -> the digits show me, this is a OpenVZ 028(test0)18.1 patch imho a good overview about 2.6.18 OpenVZ kernelpatches and -images listed at http://download.openvz.org/kernel/branches/2.6.18/

Regards,

Thorsten
