Subject: problem installing vzyum-2.4.0-11.noarch
Posted by ajneil on Wed, 11 Apr 2007 15:14:18 GMT

I have a fresh install of CentOS 4.4 x86_64 as a host and am attempting to
install OpenVZ

I have installed:
vzrpm44-python-4.4.1-22.5
ovzkernel-2.6.18-8.el5.028stab027.1
vzrpm44-4.4.1-22.5
vzquota-3.0.9-1
vzctl-3.0.16-1
vzrpm43-4.3.3-7_nonptl.6
vzctl-lib-3.0.16-1
vzrpm43-python-4.3.3-7_nonptl.6

when I try to install vzyum I get the following:

error: Failed dependencies:
        cElementTree.so is needed by vzyum-2.4.0-11.noarch

despite the fact that cElementTree.so is provided by:
python-elementtree.x86_64   1.2.6-4.2.1   installed

do I need to install the i386 version?

The tools do not work on x86_64 and I feel that it must be addressed
but it seems to be overlooked as of yet.

/b

Yes I eventually found the link on the wiki about installing on centos and fedora 64 bit servers.

Indeed, it is most unfortunate.

What we do is run a 64-bit kernel with 32-bit userland. It isn't
perfect, but our guests only need <32MB memory anyway, so it doesn't
hurt too much.
