When trying to create a VE, I get this:

```
vzquota : (error) Quota on syscall for 102: File exists
vzquota on failed [3]
vzquota : (error) Quota is not running for id 102
```

The VE gets created but when I try to start it I get:

```
vzctl start 102
```

```
Starting VE ...
```

```
vzquota : (error) Quota on syscall for 102: File exists
vzquota on failed [3]
```

```
#vzlist -a
```

```
102      - stopped some_ip some_host
```

```
#vzquota -v show 102
```

resource	usage	softlimit	hardlimit	grace
1k-blocks	4	1048576	1153434	
inodes	1	200000	220000	

```
/var/log/vzctl.log:
```

```
2007-04-19T17:45:41-0400 vzctl : VE 102 : Starting VE ...
```

```
2007-04-19T17:45:41-0400 vzctl : VE 102 : vzquota on failed [3]
```

Service vz is started through /sbin/service.

Running 2.6.18-8.el5.028stab027.1 on CentOS 4. /vz is not on dedicated partition.

Anyone knows what might be the problem here?

Thanks in advance.

~matti

It seems that you have usual Linux disk quota running on filesystem, where OpenVZ private area resides. You should turn Linux quota off, remount filesystem and try create/start VE again.

HTH,  
Vasily.

Setting DISK\_QUOTA=no gives:

2007-04-20T04:02:41-0400 vzctl : VE 102 : Unable to set capability: Operation not permitted

2007-04-20T04:02:41-0400 vzctl : VE 102 : Unable to set capability

Anyone?

Hello,

please, your vzctl version and kernel version. Do you create or start VE when this message appears? Please post the output of `cat /proc/\$\$/status` command.

Thanks,  
Vasily.

And the contents of /etc/vz/conf/<veid>.conf and /etc/vz/vz.conf files.

Thanks.
