Has anyone played with the kernel's Timer Frequency and it's effect over VPSs?

I just lowered mine from 250hz to 100hz, but don't really hvae enough VPSs running to notice any different, can anyone advise?

Thanks,

Ian,

We are not aware of any real influences of HZ on behaviour of VEs.

Peronally, I prefer higher HZ.

Maybe lower HZ can influence a bit on the precision of loadavg/top statistics.

But nothing really serious or dangerous is expected.

Thanks,

Kirill
