May I ask the question, that when the 2.6.21 series kernel planned to be supported? There are some drivers in it I really need, but I would wait with the migration for openvz. thnx!

We do not port OpenVZ to each and every 2.6.z kernel -- we just choose some of those. I doubt we will port to 2.6.21.

Speaking of drivers -- if you have some hardware that is not working with our RHEL5-2.6.18 kernel, feel free to file a bug to http://bugzilla.openvz.org/. Do not forget to describe your specific hardware (usual info plus lspci, lspci -nn output is needed) and where to take drivers, and which driver versions are working/not working for you...

ellast, what driver do you use/need?
lspci
lspci -n

I'd need the following stuff from 2.6.21:

NAT: source port randomization support
IPv4 over IPv6 IPsec tunnel
sata_sis: support SiS966/966L
Support PCI MSI in sata_vsc
driver for Initio 162x SATA devices

I'm using debian, so not really care to RHLE packages I compile my own kernel using grsecurity and openvz patchsets.

Thank you!
