hello,

I have installed 2.6.8-022stab064.1 and booted from this kernel on FC4. everthing works fine except my shorewall script which logs to ULOG. As far as I can see /lib/modules/2.6.8-022stab064.1/kernel/net/ipv4/netfilter/ doesnot have ipt_ULOG.ko , so I think ULOG is not supported with this kernel. Is there a way to get ULOG working again on 2.6.8-022stab064.1?

Thanks in advance

You need to rebuild kernel with CONFIG_IP_NF_TARGET_ULOG=m

This module is not virtualized yet, so its functionality will be available on hardware node only, not in VPSs.
