Hey, guys. I've come up with a much more flexible version of the vznetaaddroute script described in the Wiki  
[http://wiki.openvz.org/Virtual\\_Ethernet\\_device#Making\\_a\\_veth\\_device\\_persistent](http://wiki.openvz.org/Virtual_Ethernet_device#Making_a_veth_device_persistent)

Improvements in my script are:

- multiple IPs can be specified! hello, ip aliases in VEs!
- nicer syntax and error checking

And actually, I find that entire section to be not particularly easy to read and follow. Who do I contact for permission to rewrite that section?

You don't have to ask anybody -- just register on [wiki.openvz.org](http://wiki.openvz.org), login and make the changes!

Yeah, I knew that I *\*could\** just do it, but wasn't sure of the policy in that regard, and I'd hate to seem disrespectful. But if it's open policy, then I'll go for it later today, once I get my morning email cleared up.
