A kernel image, dated 5-4-07 can be downloaded here:

http://download.openvz.org/debian/dists/etch/main/binary-amd64/base/linux-image-2.6.18-openvz-12-1etch1-amd64_028.18.1etch2_amd64.deb

Does anyone know how it differs from the file with a date of 5-1-07? Is it a newer revision, should I install it?

According to http://packages.debian.org/changelogs/pool/main/k/kernel-patch-openvz/kernel-patch-openvz_028.18.3/changelog it seems to be a package build against the Debian kernel fixed for DSA-1286-1.

Thanks,
Vasily.
