--I liked the livecd, but it was 32-bit; so I...

o Cloned existing Centos 5--64 installation from sdb1 to hdd5, updated Grub, rebooted into it

+ Added openvz repo from <http://download.openvz.org/openvz.repo>
to /etc/yum.repos.d

```
' yum install vzctl vzctl-lib '
```

+ Set /boot kernel to: /boot/vmlinuz-2.6.18-8.el5.028stab031.1

! To redo nvidia, had to install pkg ovzkernel-devel

```
' yum install ovzkernel-devel '
```

+ Reinstalled Nvidia binary driver.

```
' yum install vztmp-centos-4 ' # ERROR:
```

```

--I got around it. Installed a template manually into /vz/template/cache and went from there.

+ Added " echo 1 > /proc/sys/net/ipv4/ip_forward " to boot.local

+ /vz/template/cache is where downloaded stuff goes...

+ Copied downloaded templates so they can be insalled: /vz/template/cache # cp /mnt/cdtemp/openvz/* .

REFERENCE:

http://wiki.openvz.org/Basic_operations_in_OpenVZ

+ Created new VM:

```
' vzctl create 101 --ostemplate debian-4.0-i386-minimal '  
( root disk will be in /vz/private/101 )
```

```
' vzlist -a '
```

```
' vzctl start 101 '  
vzctl exec 101 ' ps ax '
```

```
' vzctl set 101 --ipadd 10.0.100.226 --save '  
' vzctl set 101 --ipadd 192.168.2.227 --save ' # My local DHCPnet
```

```

```

--Looks like adjusting shmpages is only useful on the livecd.

- Readjusted shmpages back down to 16384 Justincase.

=====

--Note that I was able to skip the NAT step. (I have cable broadband Internet and a DHCP/NAT router.)

--Now all I need to do is set up the guest to do something \$useful/spiffy like Web serving, and test performance results.
