Hello,

I would like to know why my system power does not get shutdown when i issue shutdown -h now command. However Linux shutdown but power is still there.

Best Regards.

I have seen varying linux shutdown behavior on different motherboards. Does "shutdown -h" kill the power when using a non openvz kernel on the same physical server?

Hello,

Yes, it is.

Regards.

Hello,

have you compiled OpenVZ kernel by yourself? I know that some kernel config option (related to ACPI - Advanced Configuration and Power Interface) affects it.

HTH,  
Vasily.

Dear Vasily Tarasov,

No, I used default kernel.

Best Regards.

What default kernel? I mean version?

Thanks.

Dear Vasily Tarasov,

Default Kernel Version : 2.6.9-023stab044.4-smp

Best Regards.

Hmm... you said, when using a non-OpenVZ kernel on the same physical server, "shutdown -h" does kill the power. And what is the version of this non-OpenVZ kernel?

Dear Vasily Tarasov,

Non-OpenVZ Kernel Version is : 2.6.9-42.0.10.ELsmp

Best Regards.

Dear Vasily Tarasov,

I have recompiled Kernel with ACPI and its working.

Best Regards.

It's really strange, in all configs of prebuild kernels (  
<http://download.openvz.org/kernel/branches/rhel4-2.6.9/023stab044.4/configs/>)  
ACPI is turned on! :/
