## Subject: *SOLVED* OpenVZ with Xen support
Posted by jmslkn on Thu, 07 Jun 2007 08:35:25 GMT

I have installed the OpenVZ packages on a CentOS5 server however I would like to use OpenVZ and Xen on the same machine. What is the correct way to implement this? OpenVZ on domU or OpenVZ on dom0?

Regards,
J.

Xen developers suggest do not use dom0 for any real work. But openvz in domU may not work well currently. Openvz in dom0 have more succes reports.
