**Subject: vzyum: _rpmmodule.so: cannot handle TLS data**

When using vzyum (with any command... update, install, whatever), I get this as an error:
   /usr/share/vzpkgtools/vzrpm44/lib/python2.3/site-packages/rp m/_rpmmodule.so: cannot handle TLS data

I can't find any answers anywhere about it.  I've been looking for about an hour on Google and on the forums here.

By the way, I used the binary install of vzyum and vzrpm44, not the RPM or sources.

Does anyone know anything about this error?  I haven't figured it out yet.  Thanks!

root@elyssa:~# vzyum 1001 -y update
exec /usr/share/vzyum/bin/yum -c /vz/template/fedora-core/4/i386/config/yum.conf --installroot
/vz/root/1001 --vps=1001 -y update
There was a problem importing one of the Python modules
required to run yum. The error leading to this problem was:

   /usr/share/vzpkgtools/vzrpm44/lib/python2.3/site-packages/rpm/_rpmmodule.so: cannot handle
TLS data

Please install a package which provides this module, or
verify that the module is installed correctly.

It's possible that the above module doesn't match the
current version of Python, which is:
2.3.1 (#1, Sep 24 2003, 16:45:45)
[GCC 3.2.3]

If you cannot solve this problem yourself, please send this
message to <yum@lists.linux.duke.edu>.

I'm having this same exact problem...

anyone figure it out yet?

Also,

What's everyone's experience with using openvz with WHM/CPanel ?

How about Plesk?

One solution is like says the error message, is install the yum into the VPS...

I did it and works fine at moment...

Cheers...

Hi,

> /usr/share/vzpkgtools/vzrpm44/lib/python2.3/site-packages/rp m/_rpmmodule.so: cannot handle TLS data"

... is the rpm package "rpm-python" installed ?

Subject: Re: vzyum: _rpmmodule.so: cannot handle TLS data

Hi, the yum start to work into the VPS using this rpm....

yum-2.2.0-1.noarch.rpm
libxml2-python-2.6.16-6.i386.rpm
rpm-python-4.3.3-13_nonptl.i386.rpm

but the error in the vzyum persist...

I hope that it is of help

Cheers!!.

Try this, in the hw node, not in the ve:

mv /lib/tls /lib/tls.bak

-Tim

(By the way, I don't have this problem anymore... I wiped the server and started over fresh with Debian instead and it's working nicely.  I can't test any potential fixes.)
