I have a system that is crashing every few days. I've opened bug 618 with the dump. Memory is 1 Gb,
model name   : Intel(R) Core(TM)2 CPU   6400 @ 2.13GHz

Three VEs running, none of them very busy.

At the time of the crash, not much was happening on the VE0 nor the VEs.

Thanks,
Jim.

You're using very old kernel - I answered you in the bug report
(http://bugzilla.openvz.org/show_bug.cgi?id=618). Please, update the kernel.

Thanks,
Vasily.

Installed: kernel-smp.i686 0:2.6.18-ovz028stab035.1

Thanks,
Jim.

Report us, please, if you will have the same problem.

Thanks.
