---

I've been playing around with various virtualization options on different Linux distro's, and I haven't found one that really impresses me.

I'm wondering what the opinions here are, from experienced OpenVZ users.. What is the best platform for OpenVZ and/or OpenVZ+Xen?  
How about management apps? I've found the Xen management apps I've used thus far to seem a bit basic, missing a lot of features you find on commercial products.

Is anyone else doing this? Any tips for the best solutions?
