
Subject: support for 3Ware \ 2 channel SATA RAID controller?

hi,

i'm trying to install openvz on a 2.4ghz dual xeon box running red hat EL 3 with a 3Ware Escalade 8006 raid controller. after upgrading modutils [1], the rpm install fails with "No module 3w-xxxx found for kernel 2.6.8-022stab064.1-smp".

it looks like there is support for the card with virtuozzo [2]. is the controller not supported by default with openvz?

apologies in advance if this is a silly question - i never underestimate my ability to miss the obvious.

thanks,

eric

Can you post the actual error message from rpm?

I'm not sure but I think that this driver is just compiled into the kernel, so it's not available (and not needed) as a module.

thanks for the quick reply. fwiw, i updated the original message to more directly state that i'm trying to install on a box running rhel3.

here's the output:

```
rpm -ivh ovzkernel-smp-2.6.8-022stab064.1.i686.rpm
```

warning: ovzkernel-smp-2.6.8-022stab064.1.i686.rpm: V3 DSA signature: NOKEY, key ID a7a1d4b6
Preparing... ##### [100%]
1:ovzkernel-smp ##### [100%]
No module 3w-xxxx found for kernel 2.6.8-022stab064.1-smp, aborting.
mkinitrd failed
error: %post(ovzkernel-smp-2.6.8-022stab064.1) scriptlet failed, exit status 1

I'm not sure but I think that this driver is just compiled into the kernel, so it's not available (and not needed) as a module.

is there a relatively painless workaround for this? although i've done it before my kernel upgrading skills are a little rusty and i'm confused about why mkinitrd is failing if the driver is compiled into the kernel.

Hello Eric,

We have this driver compiled into kernel.
To make mkinitrd happy you can:
1) comment string like
alias scsi_hostadapter 3w-xxxx
in your /etc/modprobe.conf file,
2) install ovzkernel rpm
3) restore original /etc/modprobe.conf file.

Thank you,
Vasily Averin

vaverin wrote on Mon, 13 February 2006 08:451) comment string like

alias scsi_hostadapter 3w-xxxx

jeeez. i need to go back to kernel 101. it's been too long since i've fiddled with kernels.

anyways, thanks for the tip! of course, it installed without a hitch, although i did also need to comment out the same string on modules.conf.
