Tell me what you think of each one.

What you think is better / why openVZ is better

i noticed problems in vserver was iptables was a complete mess up, host has to do it manually .  
and any web panels to give my customers so they can control start stop etc .

any other pointers would be cool.

also off topic a little whats better for windows VPS

Microsoft windows virtual server or virtuzzo there windows isolation things.

i think some people are having quite a bit of troubles with the virtuzzo or w/e for windows edition.

any pointers would be good also

i hate to offer windows but many people are requesting it.

right now im using linux vserver but i dont think it has much of a future.

Hi!

Noone seems eager to answer, so let me share my own narrow aspect: vserver did not have a veth-like facility, a virtual device we could bind to, add iptables rules, etc. So we chose openVZ.

it is not politically correct to answer on such questions, since we are OpenVZ developers and our

answer is clear  
search the forum there were some other messages on this.
