Subject: *RESOLVED* VE Port Injecting?

I was wondering if it's possible to inject into a port on a VE from VE0? I want an application running on VE0 to be accessible from all ip addresses being used by the VEs. I has to be do-able as its done with Virtuozzo Power Panel.

Your help is much appreciated!

Neil

Ah figured it out with prerouting

dnat="-j DNAT --to-destination"

iptables -t nat -P PREROUTING ACCEPT
iptables -t nat -A PREROUTING -p TCP -d <external IP-address> --dport 4643 $dnat <veo IP-address>:4643
