Hi

I was trying to run a Freenx on my VPS but... i can't install kde on my debian etch i386 minimal

What did i install?

apt-get install xfonts-base xserver-xorg kde-core

Then i get this message. when i try to install "kde-core" or "kde"

Setting up udev (0.105-4) ...

/var/lib/dpkg/info/udev.postinst: line 125: echo: write error: Operation not permitted

dpkg: error processing udev (--configure):

subprocess post-installation script returned error exit status 1

dpkg: dependency problems prevent configuration of hal:

hal depends on udev (>= 0.065); however:

Package udev is not configured yet.

dpkg: error processing hal (--configure):

dependency problems - leaving unconfigured

dpkg: dependency problems prevent configuration of kdebase:

kdebase depends on hal | kfreebsd-gnu | hurd; however:

Package hal is not configured yet.

Package kfreebsd-gnu is not installed.

Package hurd is not installed.

dpkg: error processing kdebase (--configure):

dependency problems - leaving unconfigured

dpkg: dependency problems prevent configuration of kde-core:

kde-core depends on kdebase (>= 4:3.4.3); however:

Package kdebase is not configured yet.

dpkg: error processing kde-core (--configure):

dependency problems - leaving unconfigured

Errors were encountered while processing:

udev

hal

kdebase

kde-core

E: Sub-process /usr/bin/dpkg returned an error code (1)

i can't do dpkg-reconfigure udev :S

any idea?

there are a template with kde running?

thx ppl for all "and sorry for my english"

What template is your VE based on? Please, post a direct link.

Is it that one:

<http://download.openvz.org/template/precreated/debian-4.0-i386-minimal.tar.gz>
md5sum: c77e7df3b9d2c371a4f2edac2b7ab8cc

Thanks,
Vasily

Hello, I was able to reproduce the problem on my local node.

While installing kde-core package, udev package is installed because of dependencies. In its postinstall script this package writes to /proc/sys/kernel/hotplug file, what is prohibited inside VE. I suggest you the following workaround: just comment the line 125 in /var/lib/dpkg/info/udev.postinst file. After that udev will install smoothly.

One more thing. Udev requires sysfs filesystem, so don't forget to add this filesystem to VE:
vzctl set 189 --features "sysfs:on" --save

HTH,
Vasily

Really thx for your help.

but know i have a new problem. When i create a connection from nxclient, the kde make a error.

inside the X.
Error - KDesktop
The process for the file protocol died unexpectedly.

and
when i start a command "konsole" inside the nxclient

DCOP communications error (Konsole)
There was an error setting up inter-process communications for KDE. The message returned by the system was:
Could not open network socket

Please check that the "dcopserver" program is running!

Unfortunately I've never worked with nxclient, but I have started some X applications inside VE (firefox and others). So I can assume from this experience, what can cause your problems. Probably failcounters are not clean in VE (`cat /proc/user_beancounters`)?

Thanks,
Vasily.
