Hi Andrew,

it seems we've accidentally lost one JBD fix (probably it was my mistake when rediffing some checkpointing changes) as Kirill has noted. A transaction can currently be released when there are still some buffers on one of its checkpointing lists. Attached patch should fix it (it still seems to apply fine). Please apply it. Thanks.

Critical bugfix -- 2.6.22-stable (no earlier versions) should get this too, right?

If so, can we get this merged into 2.6.23-rc soon?
```

Yes, the bugfix is probably obvious enough to go into -stable.
