Dear Development Team,

I am running
kernel: 2.6.18-8.1.4.el5.028stab035.1
vzctl: 3.0.18
installed via yum on CentOS 4.5

I made the template from a fresh CentOS 5 hardware install.

We are trying to prepare a lab on networking for our Unix Administration class in University of California Riverside.

The assignment is to setup a network with 2 computers, where computer A will route all of it's outgoing packets to computer B, then computer B will forward the packets to the outside.

For that purpose I have a web interface where students can:

1. Create their own VEs. When created each VE has:
   * One public IP (it shows up in vzlist)
   * The venet0 network interface
2. Get extra IPs (vzctl set VEID --ipadd 192.168.1.X)
3. Get extra Network Interfaces (vzctl set VEID --netif_add eth0)

The student then supposed to move the extra IP from venet0:1 to eth0.

It has been several attempts now.
We are failing get two VEs to communicate to each other via their eth0's

Can anyone help?

Alex Levchuk

Can you post here the output of

ip r l

ip a l

on the HN and in two VEs you want to communicate.

Thanks,
Vasily.

Dear Vasily,

Here are the outputs.

Alex

ping 192.168.1.31
works from HN
works from VE 122
but form VE 123 it gives:
From 192.168.1.32 icmp_seq=2 Destination Host Unreachable
