new to openvz so excuse my ignorance on this but when i do a
"vzyum 101 update"....on this virtual server it goes great. but
then i want to install firefox on the virtual server a then i
do a "vzyum 101 install firefox" it seems to go well but when
completed i can not ssh back into the virtual server. it says
connection refused. i am not sure where to look to fix this.
looked inside the .ssh directory but that did not help. have done this several times thinking
maybe? but i get the same
"connection refused"

jc

Can you please tell me which packages were installed?
Just paste (or attach) vzyum output here.

you are very quick!......i am going to build another virtual
server and "save" my yum output and post it as you said....will
do this asap...

thanks!

ok hope this helps....the file is called info and it has what
you requested.....i did not go through with the update

thanks!

jc

it would be good to post output of
your ssh attempt with -v key:
#ssh -v your_server

and

vzctl exec VPSID ps axf
vzctl exec VPSID ls /dev

The problem is caused by the fact udev is installed into your system, removing our dev package.

What required udev and how it can be avoided -- this is the next question, I will look at it next week.

For now, you can try to forcibly remove udev and install dev package (from /vz/template/OSNAME/OSVERSION/OSARCH/addons/) to fix the VPS.

Can you tell me which OS template have you used? I will file a bug about that, just not to forget.

yes thanks for your help......i am using Centos-4-i386-default.tar.gz   here is more about my

---

error....just noticed
after the firefox update and trying to to ssh back in it says
this....."ssh_exchange_identification:connection closed by remote host." now what i did do was before i did the firefox
update i ssh in and kept the seesion open. i am @ a point now
where i did do the update and i i kept my ssh session open
but when i try to go in on another session it gives me the error.

i also get the error "sshd dead but subsys locked"
now i did go to /var/lock/subsys and delete the file sshd
but this had no effect.
