
Subject: [PATCH] Fix leaks on /proc/{*/sched, sched_debug, timer_list, timer_stats}
Posted by [Alexey Dobriyan](#) on Tue, 17 Jul 2007 12:25:11 GMT
[View Forum Message](#) <> [Reply to Message](#)

On every open/close one struct seq_operations leaks.
Kudos to /proc/slab_allocators.

ouch ...

Acked-by: Ingo Molnar <mingo@elte.hu>

-stable material too, as far as timer_info/stats goes.

> - .release = seq_release,
> + .release = single_release,

i think seq_release() definitely needs to grow a WARN_ON() if it's being
used on an inode that was opened via single_open(). This bug is so
easily committed, and nothing but a small leak reminds us on it.

Ingo

```

Yeah, I'll try to come up with something clean.

Meanwhile full single_open() audit revealed one more such leak.
The rest seems OK.

So I have a patch which will not fully apply to -stable.

Sorry, but I can't be bothered splitting it up. Greg, Chris: please just apply the bits which apply and drop the other bits if that's OK.

Yup
