Hello guys.

It's my first post to this list. I have Opteron server with hardware
virtualization support. And I'm wondering if OpenVZ taking advantage
of hardware support? Is not, is it theorotically possible?

I would say no because the hardware support is for hypervisor systems
like VMWare and XEN, not for shared kernel systems like OpenVZ and
Solaris zones.

http://en.wikipedia.org/wiki/OpenVZ
