
Subject: Online migration "Error: undump failed: Invalid argument"

Posted by [whity](#) on Thu, 19 Jul 2007 07:45:39 GMT

[View Forum Message](#) <> [Reply to Message](#)

I did some tests with OpenVZ this week. Now im testing the online migration and run into a problem i could not solve yet.

Both systems have the same OS:

- System: CentOS 5 (x86_64)
- Kernel: 2.6.18-8.1.4.el5.028stab035.1 (from yum repo)

- Source: 172.30.101.24 (00:1B:24:1D:EA:F4)
- Target: 172.30.101.96 (00:16:36:D2:F0:FE)

Output of vzmigration:

```
[root@ovz02 ~]# vzmigrate -r yes --online -v 172.30.101.96 1001
```

```
OPT:-r
```

```
OPT:--online
```

```

```

Any ideas??

Thank you very much
Urs

Hello,

As far as I understand you have attached the kernel log from source node. Can you post here the kernel logs at destination also?

Thank you,
Vasily.

Hi Vasily

Yes, was the kernel log of the source. Forgot the one from the target:

```

Hmmm... It seems to be some checkpointing problem. Can you, please, create an archive of your VE (/vz/private/<veid>/) and put this archive somewhere, where I'll be able to download it?

Then I'll try to reproduce your problem locally and give it to the creators of checkpointing.

Thank you.
