vzctl start 510
Starting VE ...
Can't mount: /vz/root/510 /vz/private/510: No such file or directory

But files and directory exists /vz/root/510 /vz/private/510

Any idea?
thanks

how did it happen that it tries to mount /vz/root for VE 510 from private of VE 100?

attach your VE config plz /etc/vz/conf/100.conf

This two lines are garbaged:

```
VE_ROOT="/vz/root/$VEID"44"f barrier:limit)
VE_PRIVATE="/vz/private/510"
```

Should be

```
VE_ROOT="/vz/root/$VEID"
VE_PRIVATE="/vz/private/$VEID"
```

What vzctl version do you use?

Thanks.

vzctl version 3.0.14

I hashed the lines
#VE_ROOT="/vz/root/\$VEID"44"f barrier:limit)
#VE_PRIVATE="/vz/private/510"

and copied pasted new one
VE_ROOT="/vz/root/\$VEID"
VE_PRIVATE="/vz/private/\$VEID"

save + exit.

```
vzctl start 510
Starting VE ...
Can't mount: /vz/root/510 /vz/private/510: No such file or directory
```

Thanks

1. Please update vzctl till the most recent version. 3.0.14 has a bug: it can sometimes garbage the conf file.

2. Can you post output of the following commands:

```
# ls -l /vz/  
# ls -l /vz/private  
# ls -l /vz/root  
# cat /etc/vz/conf/510.mount  
# cat /etc/vz/conf/510.umount
```

3. Can you give an access to the node?

Thanks,
Vasily.

```
vzctl  
vzctl version 3.0.18
```

```
ls -l /vz/  
total 36  
drwxr-xr-x  2 root root 4096 Jan 15  2007 dump  
drwxr-xr-x  2 root root 4096 Jul 20 06:52 lock  
drwxr-xr-x 18 root root 4096 Jul 19 22:30 private  
drwxr-xr-x 17 root root 4096 Jul 19 13:49 root  
drwxr-xr-x  3 root root 4096 Jan  1  2002 template  
drwxr-xr-x  4 root root 4096 Jul 19 05:21 tmp
```

```
ls -l /vz/private  
total 3  
drwxr-xr-x 23 root root 4096 Jul 19 00:35 160  
drwxr-xr-x 20 root root 4096 Jul 19 00:35 170  
drwxr-xr-x 23 root root 4096 Jul 19 00:42 510
```

```
ls -l /vz/root  
total 3  
drwxr-xr-x 23 root root 4096 Jul 19 00:35 160  
drwxr-xr-x 20 root root 4096 Jul 19 00:35 170  
drwxr-xr-x 23 root root 4096 Jul 19 00:42 510
```

```
cat /etc/vz/conf/510.mount
cat: /etc/vz/conf/510.mount: No such file or directory
```

```
cat /etc/vz/conf/510.umount
cat: /etc/vz/conf/510.umount: No such file or directory
```

Tnx

Ok, what about an access to the node?

Also, can you post the output of the following command:

```
# vzctl --verbose mount 510
```

Thanks

[View Forum Message](#) <> [Reply to Message](#)

```
vzctl --verbose mount 510
Can't mount: /vz/root/510 /vz/private/510: No such file or directory
```

How do you want me to provide the access? Shall I send it via ICQ if you are online there.

Thanks
