Hello!

Is there a way to get the memory usage of a specific VPS? For the VPS Owner/Admin?

As Serveradmin you have vzmemcheck. But as VPS Admin free or top or something like that - even /proc/meminfo report only the size for the full server...

Stefan

you have access to /proc/user_beancounters inside VPS, which can be checked to see how much resources were consumed.

Oh i forgot - thanks.

Is it planned to modify /proc/memstat in VPS environment to match the "real" values - showed in /proc/user_beancounter or vzmemchk ?

You mean /proc/meminfo?
yeah, it will be virtualized. Not a problem.
