I'm running CentOS 5 on the HN, using x86_64 architecture (dual opteron dual core servers). How can I create new VEs also based on the CentOS 5 x86_64 distribution? I don't find this available in the template area. Any tip? Thanks! Fernando

Hello Fernando,

well, you see, we haven't created it yet and nobody created (or we are unaware about it). At the same time you can try to create it by yourself (for example taking http://wiki.openvz.org/Slackware_template_creation as an example). If you succeed and share newly created template we can add it to the pool of the available templates in "contributed" list.

Thank you,
Konstantin.

You see, you are lucky.
Less than 3 days left and sspt has already created templates you were asking for.

Yea, this is what I call fast
I am waiting for the new servers to start creating the templates, but someone anticipated!
Thanks!
