I'm trying to build the gkbd module for RHEL4.5 and am having trouble locating ovzkernel-devel for this kernel. Anyone know where I can get a copy, or in the alternative, how to build the gkbd module without the development RPM?

Hi Sean,

kernel RPMs includes kernel headers files and I believe that it should be enough to build any addition kernel modules.

Probably I miss something? Could you please explain what the files you are missing?

thank you,

Vasily Averin
