Hi,
New templates created for i386 and x86_64 architectures
<http://www.ptxl.net/templates/centos-5-i386-default.tar.gz>
121M
<http://www.ptxl.net/templates/centos-5-i386-minimal.tar.gz>
43.3M
http://www.ptxl.net/templates/centos-5-x86_64-default.tar.gz
139M
http://www.ptxl.net/templates/centos-5-x86_64-minimal.tar.gz
47.9M
<http://www.ptxl.net/templates/cern-4-i386-default.tar.gz>
123M
<http://www.ptxl.net/templates/cern-4-i386-minimal.tar.gz>
45.9M
http://www.ptxl.net/templates/cern-4-x86_64-default.tar.gz
134M
http://www.ptxl.net/templates/cern-4-x86_64-minimal.tar.gz
51.3M

I put those to <http://download.openvz.org/template/precreated/contrib/>

But why those files are so big compared to same i386 packages? Can you check it?

121M centos-5-i386-default.tar.gz
43M centos-5-i386-minimal.tar.gz
321M centos-5-x86_64-default.tar.gz
122M centos-5-x86_64-minimal.tar.gz

It's really strange, i've recreated both, in different hosts [both x86_64]
Cache file centos-5-i386-minimal.tar.gz [112M] created.

Cache file centos-5-x86_64-minimal.tar.gz [122M] created.

The packages in minimal.list are:

```
ed
basesystem
coreutils
openssh-clients
openssh-server
less
vim-minimal
iptables
rpm
crontabs
gzip
passwd
rootfiles
sudo
tar
tmpwatch
yum
# Add-ons for VZ
dummy-centos-5
vzdev
MAKEDEV
```

My bad

The templates are leaving /vz/ with the rpm cache, i'm rebuilding the templates and i'll release it shortly.
