Your can use ipt\_connlimit without any problem. Just do:

1) Install ipt\_connlimit module how described in the "Netfilter Extensions HOWTO"

While configuring your kernel, you will see new options in ``Networking Options -> Netfilter Configuration". Choose the options you need, recompile & install your new kernel.

Once your new kernel is installed, you can go ahead and compile and install the ``iptables" package, from the `userspace/' directory as follows :

```
# make && make install
```

...
