Here is my problem.

```
vzctl start 201
```

```
Starting VE ...
```

```
Initializing quota ...
```

```
vzquota : (error) Quota is running, stop it first
```

```
vzquota init failed [5]
```

```
vzquota stat 201
```

```
vzquota : (error) Can't open quota file for id 201, maybe you need to reinitialize quota: No such file or directory
```

. /var/vzquota/quota.201 does not exist. Maybe it got deleted somehow (by a human error of some kind).

How should i "rebuild" the quota file?

And for another VE,

```
vzctl stop 203
```

```
Stopping VE ...
```

```
VE was stopped
```

```
vzquota : (error) Quota off syscall for id 203: Device or resource busy
```

```
vzquota off failed [3]
```

Thank you

Failing quota off with 'Device or resource busy' error means that some file from VE private area was in use: might be some process running on HN opened it or just somebody had an ssh session opened with current dir in /vz/private/201/...

Unfortunately there is no general algorithm of finding a guilty process, but you can try check 'ls of <private area>', /proc/<pid>/cwd, /proc/<pid>/fd, /proc/<pid>/maps
