Hi there,

how do I run a script before or after a VPS has been started or stopped? I couldn't find this information in the docs.

Actually all I want to do is a 'mount -obind', so any solution would be fine. Does anybody have a hint?

Thanks  
Friedrich Schäuffelhut

Use the search, Luke!

this post sheds some light on the topic.

Thank you.  
btw in gentoo those action scripts go into /etc/vz  
That took me an other while to find out.
