Hello everybody.

I've tried to do an online migration of my Callweaver (asterisk fork) VE and I get this message:

```
Can not suspend VE: Device or resource busy
task 12621/13645(callweaver) uses posix timers
Checkpointing failed
Error: Failed to suspend VE
```

How could I solve?

Kernel is: 2.6.18-028stab039

Thank you

Hi,

The only way to solve this problem now is to stop Callweaver before migration, because it uses POSIX timers, that are not supported by online migration now.

I filled the bug about the problem: [http://bugzilla.openvz.org/show\\_bug.cgi?id=676](http://bugzilla.openvz.org/show_bug.cgi?id=676)

Thank you,  
Vasily
