**Subject: Loading Kernel Modules into VPS context (non iptables)**
Posted by RapidVPS on Thu, 02 Mar 2006 03:43:23 GMT

Hi. I have a kernel module I wish to be use in a VPS. It is currently loaded in my hardware node. It is not an iptables module.

I could not find any information about this in the openvz manual. Is this possible?

Rick

Generally -- no.

Although if this is a device driver, you can "export" that device into a VPS, using --devnodes option to vzctl set command. I hear people using it with some Asterix hardware.
