Subject: Acks for 3 pid-namespace patches

Posted by [Sukadev Bhattiprolu](#) on Tue, 19 Sep 2006 00:01:04 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Wanted to check if we have a consensus on following three patches and see if we are ready to send them to akpm and LKML.

<http://www.sr71.net/patches/2.6.18/2.6.18-rc6-mm2/2.6.18-rc6-mm2-lxc1/broken-out/pid-namespace-rename-ospace-to-pid-namespace.patch>

<http://www.sr71.net/patches/2.6.18/2.6.18-rc6-mm2/2.6.18-rc6-mm2-lxc1/broken-out/pid-namespace-add-pid-namespace-to-nsproxy.patch>

<http://www.sr71.net/patches/2.6.18/2.6.18-rc6-mm2/2.6.18-rc6-mm2-lxc1/broken-out/pid-namespace-add-child-reaper-to-pid-namespace.patch>

For the last patch add-child-reaper-to-pid-namespace, there was discussion on how to implement killing all processes in a pid-namespace when the reaper dies, but can we address that in a follow-on patch ?

And here is the first patch, (renmae-ospace).

Here is the second one, add-pid-namespace-to-nsproxy

From: Sukadev Bhattiprolu <sukadev@us.ibm.com>

Subject: add pid\_namespace to nsproxy

Add a notion of pid namespace to nsproxy (and by extension, to task\_struct).  
Currently there is only one pid namespace, init\_pid\_ns and all tasks belong to this pid namespace. When a new task is created, it inherits its parent's pid namespace (in copy\_process()).

This is based on Eric Biederman's patch: <http://lkml.org/lkml/2006/2/6/285>

Finally, here is the patch to add child-reaper to pid\_namespace.

From: Sukadev Bhattiprolu <sukadev@us.ibm.com>

Subject: add child reaper to pid\_namespace

Add per-pid-space child-reaper. This is needed so processes are reaped within the same pid space and do not spill over to the parent pid space. Its also needed so containers preserve existing semantic that pid == 1 would reap orphaned children.

This is based on Eric Biederman's patch: <http://lkml.org/lkml/2006/2/6/285>
