Ladies and Gentlemen!

here is the first Linux-VServer version (testing)
with support for the *spaces (uts, ipc and vfs)
introduced in 2.6.19 ...

<http://vserver.13thfloor.at/Experimental/patch-2.6.19-vs2.1.x-t1.diff>

it might not be as perfect as the kernel itself *G*
but it does work fine here, and with recent tools
most virtualization features work as expected

please if you do testing, report issues or comments
to the Linux-VServer mailing list or to me directly
(at least CC would be fine) and do not bother the
nice kernel folks ...

enjoy,
Herbert

OpenVZ has been using them for more than a month already ;-)

Great !

I'm dreaming that the next patchsets will not require as much
debate. nah, stop dreaming Cedric :)

Thanks to Andrew and Linus who made it happen.

C.

great for you, here some details:

- 2.6.19 was released 29th Nov 2006
- OpenVZ page shows 2.6.9-023, 2.6.16 and the 2.6.18 development
- Linux-VServer has followed the -rc series too, so that's nothing new
- I didn't manage to find an OpenVZ patch for 2.6.19 on your site

but probably all the changes from 2.6.19 have been backported to the stable 2.6.9 kernel several months ago :)

best,
Herbert
