You gave too little information to us to provide a helpful answer.

What IP address do you use on the host? What IP for the VPS? Which host distro do you run? What distro in VPS? Have you set up nameserver in VPS? Can you ping host IP from the VPS? Can you ping default host gatewat from the VPS? Can you ping nameserver from the VPS?

IP Address On VPS: 192.168.254.8
IP Address On Host: 192.168.254.4 (assigned DHCP)
OS Distro On Host: Cent OS 4
OS Distro On VPS: Cent OS 4

No i have not setup a name server in VPS. Yes i can ping host ip form inside the VPS shell. yes i can ping default host gateway ok!! umm i just found this out i can ping ip's form inside the vps.. but i cant ping any domains. hmmm

OK so now you know what to do, right? Set up a name server IP for the VPS, using vzctl set VPSID --nameserver x.x.x.x --save. In your case x.x.x.x should be the same as 'nameserver x.x.x.x' in host's /etc/resolv.conf.
