Hello,

I'm trying to install openvz on RHEL 4, DELL PowerEdge 750. After

```
# rpm -ihv vzkernel-2.6.8-022stab034.1.i686.rpm
```

I get

```
[root@redhat virtuoizzo]# rpm -ihv vzkernel-2.6.8-022stab034.1.i686.rpm
```

```
warning: vzkernel-2.6.8-022stab034.1.i686.rpm: V3 DSA signature:
```

```
NOKEY, key ID a7a1d4b6
```

```
Preparing... ##### [100%]
```

```
1:vzkernel ##### [100%]
```

```
WARNING: No module aacraid found for kernel 2.6.8-022stab034.1,  
continuing anyway
```

```
WARNING: No module ata_piix found for kernel 2.6.8-022stab034.1,  
continuing anyway
```

Any help?

TNX

Command
'mkinitrd --builtin=aacraid
--builtin=ata_piix /boot/initrd-2.6.8-022stab034.1.img 2.6.8-022stab034.1'
will help.
We compile in these modules.

Actually it is just a warnings due to the fact that most IDE/SCSI
drivers are compiled in OVZ kernel and are absent as modules.
But RHEL provides these as modules, so it's tools are complaining a bit.

You can check that /boot/initrd-2.6.8-022stab034.1.img was still created
successfully or create it manually as dim@ wrote to you:

```
# mkinitrd --builtin=aacraid
```

--builtin=ata_piix /boot/initrd-2.6.8-022stab034.1.img 2.6.8-022stab034.1
