maybe I'm wrong, but AFAIR someone already installed it or asked something about it. Try to dig forum. If not, we will be glad to help with it if you encounter any problems.

Is Asterisk something for VoIP?

---

Yes. Asterisk is a SIP based softpbx for VoIP. I just got it running last night in a VPS. I will post a howto later this week...

Hi,

e.g. asterisk in vps with debian stable aka. "sarge"

```
$ apt-get install asterisk
```

```
$ nano /etc/defaults/asterisk
```

change:

```
RUNASTERISK=no -> yes
```

```
AST_REALTIME=yes -> no (for realtime, you need
```

```
$ /etc/init.d/asterisk start
```

modify the config files for asterisk, and done!

if you need capi or/and zaptel/zaphfc:

\* for capi: you need the /dev files on you hw-node and vps:

```
crw-rw---- 1 root dialout 68, 0 Jan 3 2006 /dev/capi20
crw-rw---- 1 root dialout 68, 1 Jan 3 2006 /dev/capi20.00
crw-rw---- 1 root dialout 68, 2 Jan 3 2006 /dev/capi20.01
crw-rw---- 1 root dialout 68, 3 Jan 3 2006 /dev/capi20.02
[...]
```

/\* if the files doesn' exist use mknod for creating it\*/

and in your vps config add for directly access:

```
DEVICES="c:68:0:rw, c:68:1:rw, c:68:2:rw"
```

\* for zaptel/zaphfc:

```
crw-rw---- 1 root dialout 196, 0 Jan 4 2006 ctl
crw-rw---- 1 root dialout 196, 1 Jan 4 2006 1
crw-rw---- 1 root dialout 196, 2 Jan 4 2006 2
crw-rw---- 1 root dialout 196, 3 Jan 4 2006 3
crw-rw---- 1 root dialout 196, 4 Jan 4 2006 4
[...]
```

```
crw-rw---- 1 root dialout 196, 253 Jan 4 2006 timer
crw-rw---- 1 root dialout 196, 255 Jan 4 2006 pseudo
crw-rw---- 1 root dialout 196, 254 Jan 4 2006 channel
```

/\* if the files doesn' exist use mknod for creating it\*/

and in your vps config

```
DEVICES="c:196:0:rw, c:196:2:rw, c:196:1:rw, c:196:253:rw,c:196:254:rw,c:196:255:rw"
```

if need both (capi and zaphfc)

```
DEVICES="c:68:0:rw, c:68:1:rw, c:68:2:rw c:196:0:rw, c:196:2:rw, c:196:1:rw,  
c:196:253:rw,c:196:254:rw,c:196:255:rw"
```

Regards,  
Thorsten

Hi Thorsten,

Perhaps you have a newer version of asterisk. In my version, if one wants to use a telephone line input (zapata/zaptel), then it is necessary to create /dev/zap directories, in which case, these would also need to be managed by the VE and given access through DEVICES. If the PBX is doing only VoIP (SIP, etc.) then this may not be necessary.

Based on other posts, I would think that a VE-based Asterisk system would have a problem handling audio devices. Do you have any experience in this area?

Regards,  
rollinw

Hi,

sorry for this delayed reply,

@rollinw:

What kind of problems do you mean ?  
Connect to audio hw device through alsa or oss ?

Regards,  
Thorsten

Thorsten

If the audio card/chip is passed to the VE to manage exclusively, this arrangement will work OK, I guess. Audio hardware is not the kind of resource that can be successfully shared among multiple VEs, since it performs realtime processing.

For a pure VoIP implementation, this wouldn't be a concern. I am unsure how this would affect a zaptel implementation. Anything else is fairly obscure and is hard to say if it'll even come up.
