
Subject: [PATCH] Hookup group-scheduler with task container infrastructure
Posted by [Srivatsa Vaddagiri](#) on Mon, 10 Sep 2007 17:10:49 GMT
[View Forum Message](#) <> [Reply to Message](#)

Ingo and Andrew,

The cfs core has been enhanced since quite sometime now to understand task-groups and provide fairness to such task-group. What was needed is an interface for the administrator to define task-groups and specify group "importance" in terms of its cpu share.

The patch below adds such an interface. Its based on the task containers feature in -mm tree. I request you to review and include the patch in your trees for more wider testing from community.

Note that the load balancer needs more work, esp to deal with cases like 2-groups on 4-cpus, one group has 3 tasks and other having 4 tasks. We are working on some ideas, but nothing to share in the form of a patch yet. I felt sending this patch out would help folks start testing the feature and also improve it.

```

Sorry for very lazy response..

num_possible_cpus() just returns # of possible cpus. Then it will not return Max-cpu-id to be used. I think just use NR_CPUS here is an easy way.

Thanks,
-Kame

```

Good catch! Yes, you are right, the pointer array needs to be NR_CPUS size.

On closer examination, I think I can simply use alloc_percpu() here.
Will send a patch after some testing.
