OpenVZ project has created and opened up a git repository to host the OpenVZ software.

Web interface: <http://git.openvz.org/>
GIT repos home: <http://git.openvz.org/pub/>

There are currently two projects hosted:

linux-2.6-openvz:
current development OpenVZ kernel (2.6.16 based)

linux-2.6-openvz-ms:
stuff intended to be pushed into mainstream
and being discussed with other teams

This git is read-only; if you want to submit a patch, send it to devel@openvz.org list. More formal patch submission rules are here: <http://openvz.org/development/patch-policy>

Regards,
OpenVZ team.
