
Subject: [NETNS][patch 1/1] fix allnoconfig compilation error
Posted by [Daniel Lezcano](#) on Wed, 12 Sep 2007 20:48:27 GMT
[View Forum Message](#) <> [Reply to Message](#)

From: Daniel Lezcano <dlezcano@fr.ibm.com>

When CONFIG_NET=no, init_net is unresolved because net_namespace.c is not compiled and the include pull init_net definition.

This problem was very similar with the ipc namespace where the kernel can be compiled with SYSV ipc out.

This patch fix that defining a macro which simply remove init_net initialization from nsproxy namespace aggregator.

Compiled and booted on qemu-i386 with CONFIG_NET=no and CONFIG_NET=yes.

Signed-off-by: Daniel Lezcano <dlezcano@fr.ibm.com>

Acked-by: "Eric W. Biederman" <ebiederm@xmission.com>
```

This looks good and is quite simple.

My apologies for over looking the case where the networking stack is not compiled in.

Eric
