hi all

i want know whats different

/dev/vzfs

vzfs

/dev/simfs

simfs

and how to make it vzfs

thanks

Well, vzfs is very very very much cooler than simfs, you can find their differences using our wiki resource.

vzfs is a feature of Virtuozzo so to use it you have to buy Virtuozzo.

what is advantage " vzfs "

what is advantage "simfs "

thanks

You can find some words about VZFS here:

<http://www.montanalinux.org/openvz-kir-interview.html>
<http://www.eukhost.com/forums/showthread.php?t=549>

You can think about SIMFS as about simple bindmount. Strictly speaking this is incorrect comparison, that the behavior is nearly the same.
