I'm currently have a hosted VPS using OpenVZ. I'm using the opensuse template, that has been supplied by Openvz.org.

It seems that the template is running Opensuse Linux 10.0. I received an email from Suse in regards to this version being discontinued and not supported or patched as of the 30th of November.

[opensuse-announce] Advance notice of discontinuation of SUSE Linux 10.0

Are there any plans to release a updated version of the Opensuse template?

By not having an actual install of OpenVZ, has anyone else created, or released a newer template of the Suse operating system?

Thanks in advanced,
JB.
